WHAT'S NEW IN RADAROPUS 2.1.13

*Updated including new implementations and improvements of version **2.1.13***

RadarOpus **2.1.13** will be delivered as a **Live Update** (onto versions 2.1.11 and 2.1.12). Users of RadarOpus 2.0 will first need to manually update to 2.1.11 (in the menu: Help – Check for program updates).

This version is an intermediate release, offering some important technical improvements.

- Activating RadarOpus has become easier
- IMPORTANT: users will need this update **to add new (payable) documents** to their RadarOpus configuration.
- Easier to purchase documents through the Content Updater
- Remedy and author **catalogs** haven again been **expanded**

REPERTORY AND MATERIA MEDICA: NEW IMPLEMENTATIONS

- **Activating RadarOpus** has become much easier.
  The user will just need to insert the Personal Activation Code, given by the RadarOpus team or by the local dealer. No other personal information (name, country, email...) will be required during the activation. The Activator itself understands whether the license must be installed as a software license or on a (hardware) dongle. The Activator also confirms the license importation, communicating it automatically to the CodeMeter License Central.

- Program installation has been made easier, by using a single exe file for Windows, or a DMG file containing a simple app for Mac users

- New SQL scripts have updated the authors and remedies catalogs in RadarOpus, showing:
  - 8.186 remedies (+ 165 compared to 2.1.12)
  - 2.396 authors (+ 10 compared to 2.1.12)
  - Here are some examples of new remedies requested by some authors: Kilauea lava (Franz Swoboda); Abelia parvifolia and more wonderful plants (Jan Scholten); Yellow tourmaline and more gems (Peter Tuminnello); Posidonia oceanica and more plants (Michal Yakir), Tapinella atrotomentosa (Olga Fatula); Tachypodoiulus niger (Filip Degroote); Diindolylmethane (Farokh Master); Sol africae (Valdimir Petrocci); Mastitis nosode (Liesbeth Ellinger)

NEW DOCUMENTS AVAILABLE FOR RADAROPUS USERS

- After installing 2.1.13 please regularly check your Content Updater for the latest releases (under Help Menu)
- IMPORTANT: if you purchase a document you **will need** version 2.1.13 in order to view the document in your RadarOpus. Activation codes created after 2.1.13 are not compatible with older RadarOpus versions.

REPERTORY AND MATERIA MEDICA: IMPROVEMENTS

- Improvement to the **Content Updater** window:
  - If the user downloaded a payable document BEFORE purchasing it, after the purchase was complete, the user could not see the document. This has been be solved.

- If Synthesis is displayed in two languages and the user navigates to "Generalities - Food and drinks - milk – desire", the program does not crash any more when pressing CTRL+C. This only occurred when the first language was not English.

- On Mac computers, when RadarOpus program starts, the splash screen no longer appears on top of the window that allows the selection of the Wibu key.

PATIENT FILE (WINCHIP): IMPROVEMENTS

- None
